

## *Eragrostis elongata* (Lavender Grass)

### Description

A highly ornamental small grass, tussock in nature, with a beautiful lavender coloured inflorescence.

### Height

30cm – 40cm

### Habitat

Moist areas on clay and sandy soils in open woodland and grassland. Often found in depressions that are not boggy.

### Flowering

Spring - Summer

### Flowers

Lavender

### Landscape Use

Mass planting, revegetation.  
Ornamental. Good coloniser.  
Great bird habitat plant.  
Doesn't compete well with weeds.  
Warm season grass.
