

Sorghum leiocladum (Wild Sorghum)

Description

A dense tussock very similar in appearance to *Themeda australis*. It differs by having a longer inflorescence and slightly greener appearance.

Height

60cm – 80cm

Habitat

Alluvial plains near rivers and creeks.

Flowering

Spring - Summer

Flowers

Slender brown inflorescence.

Landscape Use

Revegetation. Highly ornamental, excellent for mass planting. Drought tolerant, warm season grass. Low fire fuel loading.
